Logilab SDMS

A Modern Solution To Seamlessly Capture, Store & Manage Instrument Data

Logilab SDMS is a secure, scalable Scientific Data Management System that automates the capture, storage, and management of raw and metadata from laboratory instruments. It helps eliminate data silos by centralizing information across devices and departments, improving data integrity, reducing manual intervention, and enhancing overall lab efficiency.

Whether deployed in a single lab or across global sites, Logilab SDMS provides a reliable, compliant solution for managing scientific data. Suitable for regulated and non-regulated environments alike, it supports compliance with 21 CFR Part 11, EU Annex 11, and other global regulatory standards—ensuring your data remains traceable, audit-ready, and secure throughout its lifecycle.

Integrate With ANY Type Of Instrument, No Limits

PC-Based
Capture and upload data from PC based instruments without restrictions on File format or size.

Standalone
Integrate with standalone instruments using RS232/TCPIP protocols based connectivity.

Clinical Diagnostic
Directly connect to Clinical diagnostic and analytical Instruments using Interfacer

See What's Possible with Logilab SDMS

Check out examples of analytical instruments integrated with Logilab SDMS over the years.

Connect, Capture, Comply - One Solution For All Your Instrument Data

Everything You Need

To Ensure Safe, Searchable, Audit-Ready Data Across Regulated Industries

Stay compliant with regulatory requirements by capturing, storing, and managing instrument data in a secure, scalable, and audit-ready environment with Logilab SDMS.

Data Integrity In Regulated Environments

Maintain a single, secure source of truth for all instrument data. Logilab SDMS supports ALCOA+ principles—making your data attributable, legible, contemporaneous, original, and accurate.

Centralized & Scalable Architecture

Capture data from PC-based instruments via RS232, TCP/IP, or file drop. All data—structured or unstructured—is securely archived on a centralized server.

Controlled, Secure Data Management

Store data with full version control and built-in audit trails. Both raw and processed files remain traceable and protected for regulatory compliance.

Flexible Deployment Across The Globe

Deploy on-premises, in the cloud, or across multiple locations. Logilab SDMS supports centralized oversight and seamless collaboration across your infrastructure.

Built For CGMP, GLP & Regulatory Compliance

Designed to meet 21 CFR Part 11 and EU Annex 11 requirements, making it ideal for GxP environments that demand complete data integrity and audit readiness.

Under The Hood: What Makes Logilab SDMS Enterprise-Ready

Make Your Data Findable, Available, Interoperable & Reusable (FAIR Principles)

End-to-End Data Protection: Capture, Archive, Retrieve

Versatile Data Capture

Push or pull data securely from client to server with original folder structure preserved. Designed for seamless integration with diverse instrument types and workflows.

FTP Backbone with Built-In Integrity Checks

Ensure consistent, verifiable transfers with secure FTP and built-in data validation. Now with Cloud Object Storage for scalable, tamper-evident archival and resilient disaster recovery.

Restore with Confidence

Retrieve any previous version or recreate original folder structure—ensuring business continuity and regulatory readiness.

Instruments with original folder structure

The screenshot shows the Logilab SDMS interface. On the left, a sidebar lists folders under 'Quality Control', including 'AGARAMDEMO/INS02/Empower3', 'AGARAMDEMO/INS01/Scanning Electron Micros', 'AGARAMDEMO/INS03/Nasuni Drive', and 'AGARAMDEMO/INS08/HPLC'. The main area displays a table of files with columns for Name, Version No, and Upload On. The table lists several 'HPLC Anion Method' files with version 1, uploaded on 2023-10-30 16:28:35. To the right, a 'File Information' panel shows details for the selected file 'HPLC Anion Method -10.pdf', including its size (163.00 KB), login username (Administrator), client name (AGARAMDEMO), status, and timestamps for creation and modification. A 'Task Type' of 'Scheduler Task' and 'Source Path' are also shown. A blue arrow points from the 'Instruments with original folder structure' text to the folder list, and another blue arrow points from the 'Automatic Metadata captured' text to the file information panel.

Controlled User Access & Custom Permissions

User-Based Access Control & Custom Permissions
Granular role-based access ensures only authorized users can view or modify data. Flexible permission settings support collaboration without compromising security

Validation-Ready with 21 CFR Part 11 & EU Annex 11
Includes a fully integrated electronic signature and audit system to help your lab meet global regulatory standards.

Logical Data Segregation & Navigation Efficiency

User-Defined Logical Separation of Data
Organize captured data by roles or functions (e.g., QC, Research, QA) to streamline workflows and simplify compliance with internal access policies

Easy Navigation & Filter-Driven Search
Enable users to quickly find what they need using intelligent filters and intuitive file structures, reducing time spent locating critical data.

Break Down Data Silos with Centralized Control

Cutting-Edge Data Extraction
Effortlessly parse large volumes of instrument data to extract structured, searchable metadata for use across LIMS, ELN, or other systems.

Unified Data Hub
Access, manage, and analyze all captured data from a centralized platform, fully compliant with global standards like 21 CFR Part 11.

Go Beyond Basic Compliance With Logilab SDMS

Data Integrity (ALCOA) & Regulatory Standards Built In

Logilab SDMS is a powerful, enterprise-grade Scientific Data Management System designed to help labs and industries achieve full compliance with global regulatory frameworks such as 21 CFR Part 11 and EudraLex Annex 11, while fully aligning with ALCOA principles for data integrity. When you implement Logilab SDMS, you unlock robust platform-wide capabilities, including:

- **Automated data capture** from any scientific instrument—PC-based or standalone —via RS232, TCP/IP, or analog ports
- **Centralized Storage and Metadata Handling** - Securely store both raw data and metadata, with structured organization using tagging and templates to support standardization, traceability, and streamlined review.
- **Searchable central repository** with full-text indexing and metadata tagging for fast data retrieval
- **End-to-End Auditability** - Built-in checksum validation, event logging, and archival features ensure long-term data reliability, audit readiness, and regulatory compliance.
- **Human-Readable Data Outputs** for regulatory review —generate PDF and printfriendly formats to ensure 21 CFR Part 11-compliant documentation and audit readiness.
- **Custom Access and Application Controls** - Define access hierarchies and roles across all applications, ensuring data is only accessible to authorized users, with multiple access levels for added control.
- **Integrated System Interoperability** - Seamlessly connect with external platforms such as ELNs, LIMS, and ERP systems to break down data silos and maintain workflow continuity.

Why Logilab SDMS Works For Modern Labs

Analytical Development Labs can capture all data generated by individual instruments to a central server

Research & Development labs of different industries (Life sciences, Pharmaceutical, Biopharma, cell & Gene Therapy, Healthcare)

QC & R&D labs to create a single source of truth. For Instrument data, raw-data, method files, reports, SOPs, human generated data with audit trails

Drug Discovery labs can use this as a central repository for all data created

Clinical Research organization (BA/BE studies, bio-clinical) & Contract Research Organization

One Solution, Endless Integrations: Connect Your Lab Instruments with Ease

Logilab SDMS - Purchase & Deployment Options

Logilab SDMS is Licensed based on number and type of Instruments

	On-Premise	Customer owned Cloud	Agaram Hosted and Managed Cloud	Aws S3+ azure compatible - Host
1 Perpetual License	✓	✓	✓	✓
2 Saas Subscription		✓	✓	✓

Role-Based Access

Granular Permissions At File, Folder, Instrument & User Level.

Enterprise-Ready INTEGRATIONS

ELN ERP
LIMS MES

Connect Effortlessly With LIMS, ELN, MES, ERP & More.

Instrument Agnostic Connectivity

Connect Any Instrument—PC-Based Or Standalone, Any Make Or Model.

Logilab
SDMS

Capture. Control. Comply.

Work With Any File Type—No Extra Steps

From PDFs And Images To CSVs And Proprietary Instrument Files,

Handle Them All Natively—No Conversions, No Hassle.

Data Versioning & Rollback

Full Version Tracking & Rollback For Audit And Review.

Multi-Lab / Multi-Site Deployment

Deploy Across Labs Globally With Location-Specific Access.

Time-Stamped File Locking

Secure File Post-Capture To Prevent Edits And Ensure Integrity.

Smart Data Retention

Automate Archive & Deletion Based On Usage Or Age.
